

Company Environmental Policy Statement

It is the policy of Sinbad Plant Limited to manage all of its activities so as to give benefit to society, ensuring that they meet relevant laws and regulations, are acceptable to our customers and the community at large and that their environmental impact is reduced to a practicable minimum.

In so doing, Sinbad Plant Limited will ensure compliance with its responsibilities under UK environmental legislation.

There are four areas in which we will positively influence environmental awareness and compliance:

- In support of our core activities, we will ensure that our process for procuring consumable supplies maximise the use of biodegradable fluids and sustainable raw materials, those that can be re-cycled and those that have already been re-cycled.
- We will ensure that our process for disposing of all waste materials allow compliance with applicable legislation / duty of care obligations and maximise the possibility for the segregation of waste that can be re-cycled from that which can not.
- Sinbad Plant Ltd will maximise the efficiency of its use of consumed energy through the adoption of an efficient transport policy for its personnel and the control of the use of its electrical supplies and consumables at its premises.
- As a provider of RRV's and operators to the railway industry, we will promote the highest standards of environmental excellence in customer organisations by matching our project's environmental controls with the policies of our customers.

Sinbad Plant Limited shall:

- Encourage and promote best practice and continuous improvement in environmental performance.
- Do all that is reasonable when purchasing or selling plant and equipment to minimise the environmental impact over the life cycle
- Provide information and assistance to ensure that materials are used, stored and disposed of in a safe and environmentally responsible manner.
- Promote the open exchange of environmental information with customers and suppliers.
- Provide appropriate environmental training where necessary.
- Comply with the requirements of its customer's environmental policies.
- Prevent pollution as far as possible by maintaining plant and equipment and ensure the efficient off-site disposal or re-use of waste materials

Environmental matters will be integrated into, and considered, in business decisions throughout the company, in particular, the identified significant aspects and impacts through the use of products, materials, equipment and natural resources from purchase to disposal.

This policy statement will be formally reviewed on an annual basis.
